Generic Test Solution for automated software testing
Voorjaarsevent Testnet: 30 juni 2008

Samenvatting:

Generic Test Solution is an integrated suite of methods and tools for automated software testing. GTS uses an intuitive colour coded approach to documenting test scenarios. An easy to use integrated toolset allows test analysts to design and document test scenarios significantly faster than with conventional methods. GTS scenarios are automatically converted into structured test scripts for automated test execution. GTS's out-of-the-box automated testing solution fully integrates with the GTS test analysis method and tools. The generic and configurable way in which GTS has automated testing can strongly shorten your test execution cycle.
